PROJECTS

Loan Default Prediction Using Machine Learning | [GitHub](#)

- Built an **end-to-end machine learning pipeline** on **~2.2M Lending Club loan records**, performing data cleaning, feature engineering, dimensionality reduction using **PCA**, and handling class imbalance with **SMOTE**..
- Implemented and benchmarked multiple models including **Logistic Regression, Naïve Bayes, Decision Tree, Random Forest, and Gradient Boosting** for credit risk prediction.
- Achieved **ROC-AUC of 0.995 with high recall**, enabling accurate identification of **high-risk borrowers** for improved financial risk assessment.
- Identified key predictive factors such as **debt-to-income ratio, credit history length, loan grade, and interest rate**, providing interpretable insights for lending decision support.

Tech: Python, Pandas, NumPy, Scikit-learn, SMOTE, PCA, Matplotlib, Seaborn

Payment Gateway Integration | [GitHub](#)

- Designed and developed a **full-stack payment gateway platform** supporting **UPI and Card payments**, including merchant authentication, hosted checkout, and transaction processing similar to industry systems like Razorpay and Stripe.
- Built **secure REST APIs using Node.js and Express.js** with API key– and secret-based authentication, enabling merchants to create orders, initiate payments, and retrieve transaction statistics.
- Implemented **merchant dashboard and responsive checkout UI using React 18, Vite, and React Router**, allowing users to track transactions, view analytics, and complete payments seamlessly.

- Engineered a **containerized microservice-style architecture using Docker, Docker Compose, and Nginx**, with PostgreSQL for persistent storage and payment validation mechanisms such as **Luhn checksum, card network detection, and UPI VPA format validation..**

Tech Stack: Node.js, Express.js, React 18, PostgreSQL, Docker, Nginx, Axios, Vite

Multi-Tenant SaaS Platform with Project & Task Management | [GitHub](#)

- Developed a full-stack SaaS multi-tenant project management platform enabling **multiple organizations** to manage users, projects, and tasks within a **single application** while ensuring strict tenant-level **data isolation** using tenant_id filtering.
- Implemented secure authentication and **role-based access control (RBAC)** using **JWT** and **bcrypt**, supporting **Super Admin, Tenant Admin**, and User roles for controlled access to tenant resources..
- Built RESTful APIs with Node.js and Express.js for tenant registration, **user management, project creation, and task tracking** with status **workflows** (todo, in_progress, completed).
- Designed a React 18 + Tailwind CSS dashboard to visualize **project statistics**, manage tasks, and monitor tenant activity, and **deployed the entire system using Docker and Docker Compose** with **PostgreSQL** for persistent storage.

Tech Stack: React 18, Node.js, Express.js, PostgreSQL, JWT, Tailwind CSS, Docker, Axios.
